

Smiles Craft Mobile — Fixes from Your Feedback

Every item you flagged in your last testing round, what changed, and a quick way to confirm each one.

Build: Feedback fixes follow-up

App version: 1.4.0 · **Platform:** Android app file (APK)

Prepared: 6 July 2026

Environment: Connected to the live system — records you create here appear on the web app too.

1. Before you start

- 1. Install the new app file (the APK)** from the link shared with you. If Android warns about installing outside the Play Store, allow it for this file. If the update won't install over the old one, uninstall the previous app first — your data is on the server, so nothing is lost.
- 2. Confirm the version.** Open **Profile** and check it reads **v1.4.0**, so you know you are testing this build.
- 3. Sign in** with your Smiles Craft clinic account — the same email and password you use on the web app.
- 4. A few checks need a two-doctor clinic** (marked below). Use an account whose clinic has more than one doctor for those — for example the two-doctor login you used last time.
- 5. One check needs a non-dental specialty** (Treatment & Orders). Use a physiotherapy — or other non-dental — account for that row.

How to record your results. Mark each row **Pass** or **Fail**. For anything still wrong, please note **(1)** the screen, **(2)** the exact steps, **(3)** what you expected, **(4)** what actually happened — plus a screenshot if possible. There is a blank feedback table at the end.

2. Summary of what changed

Each of these addresses an item you reported. The checklists in the following sections let you confirm them one by one. Tag: FIX corrected, NEW new behaviour, INFO please read.

#	Area	What changed
1	Home & Calendar — doctor buttons FIX	The doctor name buttons at the top no longer repeat the title (was "Dr Dr Rami Hamdan", now "Dr Rami Hamdan").
2	Home — appointment card FIX	Removed the empty gap between the time and the doctor's name.
3	Calendar — All Doctors FIX	In "All Doctors" view (two-doctor clinic): the Day view shows the doctor's name in place of the time; the Week view keeps the time and adds the doctor's name underneath.
4	Treatment & Orders — non-dental FIX	For non-dental specialties: the layout no longer leaves an empty field before Discount, and the Status field is hidden (recorded as completed automatically) so the visit can be saved.

#	Area	What changed
5	Treatment & Orders — clinician FIX	The order now records the doctor the appointment is actually booked with — so the correct doctor shows on the visit, on All Unpaid Bills and at the cashier.
6	New Appointment — clinician FIX	Booking from a single doctor's calendar shows that doctor as a read-only field; booking under "All Doctors" shows the doctor picker.
7	New Appointment — WhatsApp toggle FIX	The toggle now reads "Send WhatsApp confirmation" and fits neatly inside its box.
8	Patient Registration — duplicate phone FIX	The message is now short: "Phone Number already exists!" / "Click continue to proceed."
9	Schedule Future WhatsApp FIX	Scheduling a reminder now goes through (the "Doctor missing" error is resolved). Any error is shown as a clear pop-up.
10	Cashier — Record Payment FIX	The payment-method buttons are removed. The amount field is labelled "Amount (insert amount collected)" and stays editable, with the Record Payment button and Share Receipt kept.
11	Reports — Income Statement FIX	Now shows three figures only: Total Net Revenue, Total Expenses, Net Profit.
12	Reports — refresh FIX	Opening the Reports tab now refreshes the figures, so changes made on the web appear without signing out and back in.
13	Notifications — wording FIX	Reschedule and cancellation notices now name the patient and match the web wording.
14	Profile — name FIX	Your name shows the title once (no "Dr Dr").

3. Home dashboard

#	What to re-test	Steps	Expected result	Result
1	Doctor buttons	On Home (and Calendar), look at the doctor name buttons across the top.	Each shows the title once — e.g. "Dr Rami Hamdan", not "Dr Dr Rami Hamdan".	Pass / Fail
2	Appointment card spacing	Open an appointment card on Home that has no procedure note.	The time and the doctor's name sit together — no empty gap between them.	Pass / Fail

4. Calendar — "All Doctors" view

Please test this in the right mode. The doctor's name only appears when the doctor buttons at the top are set to **All Doctors** and the clinic has more than one doctor. With a single doctor — or when one specific doctor is selected — the calendar keeps showing the time, which is the intended behaviour.

#	What to re-test	Steps	Expected result	Result
1	Day view (All Doctors)	Two-doctor clinic → tap All Doctors → open Day .	Each appointment block shows the patient name and, on the second line, the doctor's name instead of the start–end time.	Pass / Fail
2	Week view (All Doctors)	Same account → tap All Doctors → open Week .	Each appointment keeps its start time and shows the doctor's name on a line beneath it.	Pass / Fail
3	Single doctor selected	Tap one specific doctor's button (not All Doctors) → open Day.	Blocks show the time again (the doctor name isn't needed when only one doctor is in view).	Pass / Fail

5. Treatment & Orders

#	What to re-test	Steps	Expected result	Result
1	Correct doctor on the order 2 doctors	As the owner, open an appointment booked for the other doctor → tap Orders .	The Clinician field shows that appointment's doctor — not your own name.	Pass / Fail
2	Correct doctor carries through	Add a procedure and Submit → check All Unpaid Bills and the cashier for that patient.	The patient's bill shows the correct doctor (each patient keeps their own doctor).	Pass / Fail
3	Non-dental layout non-dental	Sign in to a non-dental specialty (e.g. physiotherapy) → open Treatment & Orders for a patient.	No empty field appears before Discount; the Procedure spans the row with Price and Discount beneath.	Pass / Fail
4	Non-dental submit non-dental	Pick a procedure → Add to list → Submit .	There is no "Select Status" field; the visit is added and saved (recorded as completed) with no error.	Pass / Fail

6. New Appointment

#	What to re-test	Steps	Expected result	Result
1	Clinician — one doctor's calendar	Select one doctor at the top → tap a slot to book.	The Clinician field is a read-only field showing that doctor (no dropdown).	Pass / Fail
2	Clinician — All Doctors	Tap All Doctors → tap a slot to book.	The Clinician field is a dropdown so you can choose the doctor.	Pass / Fail
3	WhatsApp toggle	Scroll to the toggle above the Book button.	Reads "Send WhatsApp confirmation" and the text stays inside the box.	Pass / Fail

7. Patient Registration

#	What to re-test	Steps	Expected result	Result
1	Duplicate phone message	Register a patient using a phone number already on file.	A short pop-up appears: "Phone Number already exists!" with "Click continue to proceed." Continue still lets you save.	Pass / Fail

8. Schedule Future WhatsApp

#	What to re-test	Steps	Expected result	Result
1	Schedule a reminder	Open an appointment → New Future WhatsApp → pick a template and a future date → Schedule .	It saves successfully — no "Doctor missing" error.	Pass / Fail
2	Error shows as a pop-up	If anything is rejected (e.g. a missing field), observe how the message appears.	The message is shown as a clear pop-up, not small text.	Pass / Fail

9. Cashier — Record Payment

#	What to re-test	Steps	Expected result	Result
1	No payment-method buttons	Open a patient's bill → Record Payment.	There are no Cash / Card / Transfer buttons — just the amount and the Record Payment button.	Pass / Fail
2	Amount field label	Look at the amount field.	Labelled "Amount (insert amount collected)" ; the amount is editable and can differ from the default.	Pass / Fail
3	Record & share	Enter an amount → Record Payment.	The payment is saved and a Share Receipt option is available.	Pass / Fail

10. Reports

#	What to re-test	Steps	Expected result	Result
1	Income Statement	Open Reports → Income Statement.	Shows three figures per period: Total Net Revenue, Total Expenses, Net Profit .	Pass / Fail
2	Reports refresh	Add a treatment on the web app → return to the phone → open the Reports tab.	The figures update to include the new treatment without needing to sign out and in.	Pass / Fail

11. Notifications

#	What to re-test	Steps	Expected result	Result
1	Cancellation notice	Have a colleague cancel an appointment → open the notifications bell.	Reads "{patient name} cancelled their {date} appointment" — the patient's name is included.	Pass / Fail
2	Reschedule notice	Have a colleague reschedule an appointment → open the bell.	Reads "{patient name}'s appointment rescheduled to {new date}".	Pass / Fail

12. Profile

#	What to re-test	Steps	Expected result	Result
1	Your name	Open Profile.	Your name shows the title once (e.g. "Dr Rami Hamdan"), not "Dr Dr".	Pass / Fail

13. One item we need your help to reproduce

"Name is not showing up — it shows the family name and other fields." On every screen we checked, the name field is filling in correctly, so we could not reproduce this. When you next see it, please tell us: **(1)** which screen you were on, **(2)** whether it was your own name or a patient's name, **(3)** which fields *did* appear beside the blank name (e.g. family, email, role, date of birth, phone), and **(4)** a screenshot if possible. That will let us fix it precisely.

14. Your feedback

Use this table for anything that failed or looked off. One row per issue.

#	Screen	Steps you took	What you expected	What happened
