

Smile Craft Mobile — QA Test Plan

Milestone 2 · Build v1.0.0 · 4 June 2026

Build: v1.0.0 (build 2)

Platform: Android APK (iOS TestFlight pending Apple Developer account)

Test environment: Live backend at www.smilecraft.com

Estimated test time: 60–90 minutes for a full sweep

1. How to install (Android)

1. Download the APK file (link shared separately on WhatsApp / email).
2. On your Android phone, open **Files** → **Downloads** → tap the APK.
3. If prompted *"For your security, your phone isn't allowed to install unknown apps"*:
 - Tap **Settings** → enable **Allow from this source** → go back and tap **Install**.
4. After install, find **Smile Craft** on your home screen and open it.

2. Login credentials

Email: **mireillerahi71@gmail.com**

Password: **Karim1@91**

Some screens currently display sample data (Michael Chen, Emily Rodriguez, etc.) for a consistent demo experience. **Login itself uses the real backend** — wrong credentials show a real error message.

3. What to test

3.1 Splash + Launch

- ☐ App opens to a white splash screen showing the Smile Craft logo.
- ☐ After 1–2 seconds, the splash transitions cleanly into the Login screen (or Dashboard if already logged in).
- ☐ App icon on the home screen shows the blue Smile Craft swoosh on white background — not a generic Expo icon.

3.2 Login Screen

- ☐ Page shows: Smile Craft logo, "Welcome Back!" title, subtitle, Email + Password fields, Remember me checkbox, Forgot Password? link, Login button.
- ☐ Tap Login with empty fields → red error messages appear under each field ("Email is required", "Password is required").
- ☐ Type an invalid email (e.g. "abc") → "Enter a valid email" appears on blur.
- ☐ Type a valid email + wrong password → tap Login → "Invalid email or password" appears in red under the form.

- Tap the eye icon on the password field → password becomes visible; tap again → hidden.
- Tap Remember me → checkbox fills; tap again → unchecks.
- Tap Forgot Password? → navigates to forgot password screen.
- Enter correct credentials → tap Login → app opens to Dashboard.

3.3 Forgot Password Screen (view only — skip the full flow)

For this round, only verify the Forgot Password screen renders correctly. Don't submit the form or test the rest of the reset flow — the end-to-end reset still routes through the web app and the backend mobile endpoint isn't ready yet.

- From Login, tap **Forgot Password?** → navigates to the Forgot Your Password screen.
- Page shows: back arrow, title "Forgot Your Password", subtitle, email input field, "Send Reset Link" button, "Didn't receive the email? Resend Link" footer.
- Layout matches the designer's Figma (spacing, typography, colors).
- Tap the back arrow → returns to Login screen.

3.4 Dashboard (Home tab)

- Greeting shows "Good Morning / Afternoon / Evening [first name]!" based on current time.
- Date below greeting shows today in long format (e.g., "Wednesday, June 4, 2026").
- Bell icon top-right is tappable (currently does nothing visible — placeholder for notifications).
- Logout icon (next to bell) is tappable → confirmation dialog appears ("Are you sure you want to log out?"). Cancel → dialog closes; Log out → returns to Login screen.
- Today's Summary shows 4 cards in a 2x2 grid: Confirmed (green checkmark) · Cancelled (red X, "Needs attention" caption) · Unconfirmed (blue sparkle) · Total Appointment (blue calendar).
- Today's Appointments section shows 4 appointment cards.
- Each card has: patient initials in blue circle, name, time with clock icon, treatment, doctor, status pill (yellow Unconfirmed / red Cancelled / green Confirmed).
- Tap View All → navigates to All Appointments screen.
- Scrolling: scroll down, the 4th card should be fully visible above the bottom navbar (not clipped).

3.5 All Appointments Screen

- Header shows back arrow + "All Appointment's" title + "05 Total Patients" subtitle + blue + button.
- Search field placeholder: "Search..."
- Type "Michael" in search → list filters to only show Michael Chen.
- Type "Cleaning" in search → list filters by treatment.
- Type random nonsense → "No matching appointments." empty state.
- Clear search → full list returns.
- All 5 appointment cards visible: Michael Chen, Emily Rodriguez, Jessica Williams, David Thompson, Sarah Johnson.
- Scroll: last card is fully visible above the bottom navbar.
- Tap back arrow → returns to Dashboard.

3.6 Calendar Tab

General

- ☐ Date navigator at top shows current date with < and > chevrons.
- ☐ Day / Week / Month segmented control below.
- ☐ Selected view's tab is highlighted (white background with shadow inside the gray pill container).

Day view

- ☐ Default view when first opening Calendar.
- ☐ Chevrons step ± 1 day (date in header updates).
- ☐ Time slots from 8:00 AM down to 8:00 PM.
- ☐ Today shows 4 appointments slotted into their times: 9 AM (Emily — green), 10 AM (Sarah Wilson — orange), 11 AM (Johnny Achkar — green), 2 PM (Michael Chen — green).
- ☐ Empty time slots show dashed outline cards.
- ☐ Booked slots show colored left border + status dot top-right + name + time range + treatment + doctor.
- ☐ Navigate to a different day $\rightarrow$ most days are empty (no appointments).

Week view

- ☐ Tap Week $\rightarrow$ strip of 7 day chips appears (Mon–Sun).
- ☐ Today's chip is highlighted blue with white text; others are gray.
- ☐ Below the strip: list of today's appointments as compact cards.
- ☐ Tap a different day chip $\rightarrow$ highlight moves, appointment list updates (or shows "No appointments on this day").
- ☐ Chevrons step ± 1 week (entire strip changes to the next/previous week).

Month view

- ☐ Tap Month $\rightarrow$ calendar grid appears with weekday headers (M T W T F S S).
- ☐ Selected date has a blue filled circle around the number, with white text.
- ☐ Today shows colored dots below the date (indicating appointments exist).
- ☐ Tap any other date $\rightarrow$ blue circle moves to that date.
- ☐ Chevrons step ± 1 month.
- ☐ Days outside the displayed month are blank.

3.7 Bottom Navigation

- ☐ All 5 tabs visible: Home / Register / Calendar / Billing / Reports.
- ☐ Each tab has a brand icon.
- ☐ Active tab: icon and label in blue, label in semi-bold.
- ☐ Inactive tabs: icon and label in gray, label in regular weight.
- ☐ Tap each tab $\rightarrow$ screen switches, tab highlight updates.
- ☐ Register / Billing / Reports show "coming soon" placeholder screens with an icon + title + subtitle.
- ☐ Home tab $\rightarrow$ returns to Dashboard.

- ❑ Calendar tab → returns to Calendar (preserves last selected view and date).
- ❑ On the device's gesture indicator at the very bottom: it should appear below the tab bar labels (not overlapping them).
- ❑ From Dashboard → tap View All → bottom nav is still visible and Home is still highlighted.

3.8 Logout Flow

- ❑ On Dashboard, tap the logout icon (top-right, next to bell).
- ❑ Native confirmation dialog appears with "Log out" as title and "Are you sure you want to log out?" as message.
- ❑ Tap Cancel → dialog dismisses, stays on Dashboard.
- ❑ Tap the logout icon again, then Log out (in red on iOS, default on Android) → returns to Login screen.
- ❑ Try to navigate away from login (back button on Android) → should stay on login (no access without auth).
- ❑ Log in again with correct credentials → lands back on Dashboard.

3.9 Responsive Layout

Test on different physical phones if possible:

- ❑ No content cut off on any phone size.
- ❑ Status bar and bottom gesture indicator don't overlap content.
- ❑ Tab bar labels readable on narrow phones (not wrapping or truncating awkwardly).
- ❑ All buttons easily tappable.

4. Known limitations (please don't report these)

The following are planned but **not yet built** — these are expected behaviors, not bugs:

- **Bell icon** on Dashboard doesn't open notifications (UI placeholder, full notifications come in a later milestone).
- **+ button** on All Appointments doesn't open a "new appointment" form (Calendar M3 work).
- **Tapping an appointment card** doesn't open a detail view (M3).
- **Calendar live sync** — when the web app changes an appointment, the mobile won't visibly update until you exit and re-enter the screen.
- **Update Password screen** is currently reachable only by manual navigation — the email reset link still goes to the web. End-to-end mobile password reset needs a backend endpoint not yet built.
- **Register / Billing / Reports tabs** are placeholders ("coming soon" screens) — to be built in M3 and M4.
- **Resend Link** on Check Email screen does its job silently — no toast / confirmation appears yet.
- **App name** in some places shows "smilecraft-mobile (Dev)" or similar — this is normal for non-production builds and will say just "Smile Craft" in store builds.
- Dashboard, All Appointments, and Calendar currently show **sample data** (Michael Chen, Emily Rodriguez, etc.) — this is intentional for a consistent demo experience and will be swapped to live data before final release.

5. What to report

Please report anything you observe that:

- Causes the app to crash, freeze, or restart.
- Shows text or images cut off, overlapping, or going off-screen.
- Has buttons that don't respond when tapped.
- Looks visibly different from the designer's Figma (not matching colors / spacing / typography).
- Contains typos or grammar mistakes.
- Behaves inconsistently between two test runs (e.g., worked once, didn't work next time).
- Is confusing or unclear from a user perspective.

Bug report format

Field	Example
Title	Dashboard: 4th appointment card clipped by tab bar on Samsung S22
Device	Samsung Galaxy S22, Android 13
Steps to reproduce	1. Log in 2. Land on Dashboard 3. Observe bottom of appointment list
Expected	All 4 cards visible above the tab bar
Actual	4th card cut off behind the tab bar
Screenshot / Video	Attached

Send reports to Umer (WhatsApp / email).

6. Out of scope for this build

Feature	Coming in
Patient Registration screens	M3
Appointment detail view + edit	M3
Create new appointment	M3
Treatment & Orders, Plan of Care	M3
WhatsApp Reminders from mobile	M3
Billing / Cashier flows	M4
Reports and analytics	M4
Push notifications	M5
Offline mode	M5
Proper Profile / Settings screen	M3
iOS TestFlight build	After Apple Dev account

7. Test sweep priorities

If you only have 15 minutes — focus on:

1. Login (correct credentials)
2. Dashboard layout and summary cards
3. Calendar Day view
4. Bottom navigation
5. Logout flow

If you have 30 minutes — add:

6. Forgot Password screen — view only (don't submit)
7. All Appointments search
8. Calendar Week + Month views
9. Tab switching between Home / Calendar / placeholder tabs

If you have 60+ minutes — add:

10. Error and validation cases (wrong password, invalid email, empty fields)
11. Edge cases (very long names, dates in the past / future, navigation across views)
12. Multi-device testing on different phone sizes
