

Smile Craft Mobile — QA Test Plan

Milestone 3 + M3 Amendment · Build v1.2.0 · 15 June 2026

Build: v1.2.0 (build 4)

Platform: Android APK (iOS TestFlight pending Apple Developer account)

Test environment: Demo mode by default. Login itself hits the live backend at www.smilecraft.com ; in-app data (patients, calendar, summary cards, orders, plan of care, history) is sample data for a consistent QA experience.

Estimated test time: 120–150 minutes for a full sweep

What's new since the last QA round (v1.1.0 → v1.2.0): Treatment & Orders modal (procedure picker with auto-fill price, staged procedures, pending procedures with status updates), New Plan of Care modal (Quick Templates + 1000-char counter), Schedule Future WhatsApp modal (template + future date picker), Clinical History (Visits / Plan of Care tabs), and a rebuilt Edit / Reschedule screen with Search Patients (patient swap), Notes textarea, and Delete Appointment. The popover now lists all seven actions from the web.

1. How to install (Android)

1. Download the new APK file (link shared separately on WhatsApp / email). If you still have the previous build installed, the new one will install over it — your login is preserved.
2. On your Android phone, open **Files** → **Downloads** → tap the APK.
3. If prompted *"For your security, your phone isn't allowed to install unknown apps"*:
 - Tap **Settings** → enable **Allow from this source** → go back and tap **Install**.
4. After install, find **Smile Craft** on your home screen and open it.

2. Login credentials

Email: mireillerahi71@gmail.com

Password: **Karim1@91**

Demo-mode is on for this QA build — most screens display sample data (Johnny Achkar, Mark Eli, Marina Elon, Michael Chen, etc.) for consistent testing. **Login itself uses the real backend** — wrong credentials will show a real error.

3. What to test

3.1 Splash + Launch

- ☐ App opens to a white splash screen with the Smile Craft logo.
- ☐ Splash transitions cleanly into Login (or Dashboard if already signed in).
- ☐ App icon on the home screen shows the blue Smile Craft swoosh on white background.

3.2 Login Screen

- Layout matches M2: logo, "Welcome Back!" title, Email + Password fields, Remember me, Forgot Password?, Login button.
- Empty submit → "Email is required" / "Password is required" inline errors.
- Invalid email format → "Enter a valid email" on blur.
- Wrong credentials → "Invalid email or password" under the form.
- Password eye toggle reveals / hides the value.
- Correct credentials → Dashboard opens.

3.3 Dashboard (Home tab) UPDATED

- Greeting shows "Good Morning / Afternoon / Evening [first name]!" based on time.
- Long-format date below greeting (e.g., "Tuesday, June 9, 2026").
- Top-right header now shows a **bell button** + a **profile (avatar) button** (replaces the old logout icon from M2).
- Bell shows a **red dot** when there are unread notifications; the dot clears after you mark all as read in the Notifications inbox.
- **Doctor switcher chip strip** appears under the greeting for Owner / Assistant / Admin / SystemAdmin accounts (it is correctly hidden for non-owner doctors).
 - Default selection is "All Doctors".
 - Tap a doctor chip → Today's Summary counts and Today's Appointments list filter to that doctor.
 - Tap "All Doctors" → back to clinic-wide totals.
 - Layout stays stable as you tap between chips — content below should not jump up/down.
- Today's Summary shows 4 cards in a 2×2 grid with **outlined** (not filled) icons: Confirmed · Cancelled · Unconfirmed · Total Appointment.
- **Math check:** Total Appointment = Confirmed + Unconfirmed (Cancelled is NOT added). Example default state: Confirmed 3 + Unconfirmed 18 = Total 21. Cancelled is its own card.
- Today's Appointments shows 4 appointment cards. Same card style as M2.
- Tap "View All" → All Appointments screen opens.
- Scroll: last appointment card sits fully above the bottom navbar (not clipped).

3.4 Notifications Inbox NEW

- From the Dashboard, tap the **bell icon** top-right → Notifications screen opens.
- Header has a back arrow and "Notifications" title.
- First open seeds 4 sample notifications (new booking, confirmed, cancelled, patient registered).
- Each row shows: kind-aware icon + tint, headline, who it relates to, relative timestamp ("Just now", "5m ago", "3h ago").
- Tap "Mark all as read" → red dot on the dashboard bell clears.
- Tap "Clear all" → the list empties; the "no notifications" empty state appears.
- Back arrow returns to the Dashboard.
- Pull-to-refresh works without crashing.

3.5 Profile & Settings NEW

- From the Dashboard, tap the **profile avatar** top-right → Profile screen opens.
- Header has a back arrow and "Profile" title.
- **User card** shows: circular avatar with auto-initials, full name, role pretty-printed ("Owner Doctor", "Assistant", "Admin", etc.), email.
- **Preferences** section shows Language and Push Notifications listed as upcoming items (no toggle yet — that's intentional).
- **About** section shows app version, build number, and clinic ID.
- **Log out** button at the bottom → native confirmation dialog → Cancel keeps you on Profile, Log out returns you to Login.

3.6 Register Tab — Empty State NEW

If the patient list is empty (or has never been populated), the Register tab shows an empty-state landing screen.

- Tab opens with: centered light-blue circle containing a people icon, "No Patients Yet" heading, descriptive paragraph, and a big blue "Register First Patient" button at the bottom.
- Layout is vertically centered on the screen.
- Tap "Register First Patient" → New Registration modal opens.

3.7 Register Tab — Patient List NEW

- Once there is at least one patient, the tab shows the list view (the demo build has 3 sample patients).
- Header: outlined back-arrow button + "Patient Registration" title + "**03** Total Patients" subtitle (zero-padded count) + blue "+" button on the right.
- Search bar: full-width pill, magnifier icon left, "Search..." placeholder. Typing filters cards live by name / family / phone / clinician (case-insensitive). An "x" appears when there's text — tap to clear.
- Empty search result shows "No patients match ...".
- Each patient card has: light-blue avatar circle with initials (e.g., "JA" for Johny Achkar), name, family below, 3-dots menu top-right, then a 2-column grid (Age / Gender / Phone / Clinician), and a red "Allergies: ..." line at the bottom when present.
- The 3 sample patients are Johny Achkar, Mark Eli, Marina Elon — all under Dr. Emily Chen with Perfume allergy.
- Back button (top-left) navigates to the Home tab.
- "+" button (top-right) opens the New Registration modal.
- Tap the 3-dots menu on any card → modal popover with Edit (blue, pencil icon) and Delete (red, trash icon), separated by a thin divider. Tap outside the popover to dismiss.

3.8 New Registration (Add Patient) NEW

- Reached from the empty-state CTA OR the "+" button on the patient list.
- Modal slides up. Header: outlined back-arrow + "New Registration" + subtitle.
- Fields, in order:
 - □ **Name** (required) — placeholder "Enter your name".
 - □ **Family** (Optional).

- ☐ **DOB** (Optional) — types auto-mask as DD-MM-YYYY (e.g., 14081990 → "14-08-1990"). Future dates and invalid dates are rejected with an inline error.
- ☐ **Phone Number** (required) — country code pill on the left showing the Lebanon flag  + chevron, number input on the right with placeholder "+961". Only digits accepted.
- ☐ **Gender** (Optional) — dropdown opens a modal bottom-sheet picker. List loads from the live backend.
- ☐ **Email** (Optional) — email-format validation if provided.
- ☐ **Allergies** (Optional) — multi-line.
- ☐ **Clinician** (required) — doctor dropdown. For non-owner doctors, the field is locked to themselves with a helper line "You can only register patients under your own name."
- ☐ Empty submit → required-field errors in red under each affected field.
- ☐ Bottom row: Cancel (light grey pill, dismisses the modal) and Register (blue pill, submits).
- ☐ Submit while submitting → button shows "Saving..." and is disabled.
- ☐ **Duplicate phone:** in live mode, if the phone is already registered to another patient, a confirm dialog appears: "Phone number already used — already registered to [name]. Continue anyway?" with Cancel and Continue.
- ☐ Successful save (demo) closes the modal and returns to the patient list.

3.9 Edit Patient NEW

- ☐ From a card's 3-dots menu, tap **Edit** → Edit Patient modal opens, pre-filled with that patient's details.
- ☐ Header: outlined back arrow + "Edit Patient" + "Edit and update the details of the patients." subtitle.
- ☐ Same field set as New Registration (Name required, others optional; Phone required; Clinician required).
- ☐ DOB pre-fills in DD-MM-YYYY format from the backend's YYYY-MM-DD .
- ☐ Bottom row: Cancel + **Update** (blue pill). Update shows "Saving..." while submitting.
- ☐ On success, a **success popup** appears with a green check icon, "Patient Updated" title, and a message ending in "details have been saved successfully." Single **Done** button — tap it to close the popup and return to the list.
- ☐ The list shows the patient with updated values after Done.

3.10 Delete Patient NEW

- ☐ From a card's 3-dots menu, tap **Delete** → a confirmation dialog opens.
- ☐ Dialog has: red-bordered icon ring with an alert icon, "Delete Patient" title, "Are you sure you want to continue? This action cannot be undone." message, and Cancel (grey) + Delete (red) buttons side-by-side.
- ☐ Tap Cancel or the backdrop → dialog dismisses, patient remains.
- ☐ Tap Delete → button shows "Working...", patient is removed from the list when the call returns (instant in demo mode).

3.11 Calendar Tab — Day / Week / Month UPDATED

General

- Date navigator at top with < and > chevrons. Today's date shown in the middle.
- Day / Week / Month segmented control. Active segment is highlighted white inside the grey pill.
- **Doctor switcher** chip strip appears for Owner / Assistant / Admin / SystemAdmin (hidden for non-owner doctors). Same chip control as the Dashboard. Selection is shared — picking a doctor here also filters the Dashboard, and vice versa.
- **Per-doctor coloring**: each doctor's appointments use a consistent color across Day / Week / Month views. Picking the same doctor on the web and mobile yields the same color.

Day view

- Default view when first opening Calendar.
- Chevrons step ± 1 day; date in header updates.
- Time slots from 8:00 AM down to 8:00 PM.
- Booked slots show colored left border + status dot + name + time range + treatment + doctor.
- Empty time slots show dashed-outline placeholder cards.
- With "All Doctors" selected the day shows all 4 sample appointments; switching to a specific doctor shows only their bookings.

Week view

- Strip of 7 day chips (Mon–Sun). Today's chip highlighted blue.
- Tap any day chip → highlighted day moves, appointment list updates (or shows "No appointments on this day").
- Chevrons step ± 1 week — entire strip changes.

Month view

- Calendar grid with weekday headers.
- Selected date has a blue filled circle. Today shows colored dots below the date when appointments exist.
- Tap any other date → blue circle moves.
- Chevrons step ± 1 month. Days outside the displayed month are blank.

3.12 Appointment Popover UPDATED

- On the Calendar (Day or Week view), tap any **booked appointment card** → bottom-sheet popover opens.
- Popover header shows: patient name, status pill, date + time range, treatment, doctor.
- Seven action rows (matches the web app exactly):
 - □ **Orders** — opens the Treatment & Orders modal (see 3.13).
 - □ **New Plan of Care** — opens the Plan of Care modal (see 3.14).
 - □ **Schedule Future WhatsApp** — opens the WhatsApp scheduler modal (see 3.15).
 - □ **Edit / Reschedule** — opens the Edit Appointment modal (see 3.16).
 - □ **Clinical history** — opens the Clinical History screen (see 3.17).

- ☐ **Cancel appointment** — opens a reason picker (sheet style), pick a reason, tap Cancel → in demo mode the popover closes and the card updates to Cancelled. Already-cancelled appointments show this action greyed out with helper text.
- ☐ **Confirm appointment** — currently *greyed out / disabled* with helper text noting the backend endpoint is pending. This is intentional for this build.

- ☐ Tap outside the popover → it dismisses without changing anything.

3.13 Treatment & Orders NEW

- ☐ Reached from the popover's **Orders** action — modal screen with a header showing the patient name and "Treatment & Orders" title.
- ☐ **Add Procedure** form:
 - ☐ **Procedure** picker — opens a bottom-sheet list of the clinic's procedure catalog (demo build shows ~6 sample procedures like Cleaning, Filling, RCT, etc.).
 - ☐ **Auto-fill price:** picking a procedure populates the Price field automatically with that procedure's default price (matches web behavior). Price can still be edited manually if needed.
 - ☐ **Tooth** picker — shown only when the clinic has tooth-tracking enabled (the demo build has it enabled, so this field appears).
 - ☐ **Status** picker — defaults to In Process; also lets you pick Completed or Not Done.
 - ☐ Empty submit → required-field errors under the missing fields.
- ☐ **Staged Procedures table** ("waiting validation") — after tapping "Add" on the form above, the procedure appears as a row with columns Procedure · Tooth · Price · Status · × (remove). Multiple procedures can be staged before submitting.
- ☐ **Pending Procedures table** — separate table below, listing any in-process procedures already saved for this patient + doctor. Horizontally scrollable; each row has a status-update dropdown for moving items to Completed or Not Done.
- ☐ **Submit** — Save button at the bottom posts the staged procedures + any per-row status updates together. In demo mode the modal closes immediately and the calendar refreshes; in live mode you'll see a brief "Saving..." state.
- ☐ Back arrow / close → dismisses without saving.

3.14 New Plan of Care NEW

- ☐ Reached from the popover's **New Plan of Care** action.
- ☐ **Treatment Notes** heading + multi-line text area.
- ☐ **Quick Templates** pill row (horizontally scrollable): *Crown · RCT · Implant · Cleaning* — tapping a pill inserts the corresponding template text into the textarea. Tapping a second pill replaces the text.
- ☐ **Live character counter** below the textarea shows `xxx / 1000` . Hard cap at 1000 — typing past the limit is blocked. Counter turns red as you approach the cap.
- ☐ Empty submit → "Notes cannot be empty" inline error.
- ☐ Save → modal closes; the new entry appears in this patient's Clinical History → Plan of Care tab.

3.15 Schedule Future WhatsApp NEW

- ☐ Reached from the popover's **Schedule Future WhatsApp** action.

- ❑ **Template** picker — opens a list of the clinic's active WhatsApp templates (demo build shows a few sample templates like "Follow-up reminder", "Recall checkup").
- ❑ **Date** picker — opens the native date picker. Minimum date is tomorrow; maximum is +3 years from today. Picking today or a past date is blocked.
- ❑ Empty submit → required-field errors for template and/or date.
- ❑ Save → modal closes. In demo mode no real WhatsApp is sent; in live mode the message will fire on the chosen date via the existing reminder pipeline.

3.16 Edit / Reschedule Appointment REBUILT

- ❑ Reached from the popover's **Edit / Reschedule** action. Modal-style screen.
- ❑ **Top row**: "+ Register Patient" link on the left (opens the New Registration modal inline) + a **Search Patients** input on the right.
- ❑ **Search Patients** behavior:
 - ❑ Type fewer than 2 characters → no results shown.
 - ❑ Type 2+ characters → after a 400ms pause, the API is hit (in demo mode the local sample list is filtered the same way). A loading spinner appears briefly.
 - ❑ Up to 6 results render in a dropdown — each row shows person icon + Name Family + phone.
 - ❑ Empty results → "No matches" placeholder.
 - ❑ Tap a result → the patient block updates to the swapped patient and a small **"Swapped — undo"** pill appears next to the Patient section header.
 - ❑ Tap "undo" → reverts to the original event patient.
- ❑ **Patient block** shows Name, Family, and DOB *read-only* (from the active patient — swap or original).
- ❑ **Schedule block** — editable: **Date** (DD-MM-YYYY mask), **Start + End** (HH:MM mask). End before Start → inline error. Invalid date / time format → inline error as you type.
- ❑ **Notes** textarea (replaces the old single-line Treatment field). Multi-line, free text.
- ❑ **Doctor** shown read-only as "Dr. <name>" — assigned at booking time; not editable here.
- ❑ **WhatsApp reminder** toggle preserved.
- ❑ **Close / Save row** at the bottom. Save: in demo mode the modal closes and the calendar refreshes; in live mode you'll see "Saving..." briefly.
- ❑ **Delete appointment** — full-width red button below Save row. Tapping it opens a confirmation dialog ("Delete this appointment? — Keep it / Delete"). Confirming the delete removes the appointment from the calendar and dashboard.
- ❑ If a patient was swapped, saving updates the booking to point at the swapped patient (verify the calendar now shows the swapped patient's name on that slot).

3.17 Clinical History NEW

- ❑ Reached from the popover's **Clinical history** action.
- ❑ Header: back arrow + "Clinical History" + patient name as subtitle.
- ❑ Two pill tabs at the top: **Visits** (default) and **Plan of Care**.
- ❑ **Visits** tab — card list. Each card shows date, doctor, procedure name, tooth (if present), status pill, and price.

- ❑ **Plan of Care** tab — card list. Each card shows date, author (doctor name), and the full note text.
- ❑ Both tabs show an empty state when there's no history for that section.
- ❑ Read-only — there's no edit / delete action on these cards (editing happens in the Orders / New Plan of Care modals).
- ❑ Pull-to-refresh works without crashing.

3.18 Role Gating — Bottom Navigation UPDATED

Tab visibility per role. The QA tester logs in as the Owner account by default, so all 5 tabs are visible. If a non-owner test account becomes available, re-test against this matrix.

Role	Tabs visible
Owner Doctor (default test account)	Home · Register · Calendar · Billing · Reports
Non-owner Doctor	Home · Register · Calendar · Billing (Reports HIDDEN)
Assistant	All 5 tabs
Admin / SystemAdmin	All 5 tabs

- ❑ Active tab: icon and label in blue (label semi-bold).
- ❑ Inactive tabs: grey icon + label.
- ❑ Bottom navbar sits cleanly above the device's gesture indicator (not overlapping).
- ❑ Tap each visible tab → screen switches, highlight updates.

3.19 Responsive Layout VERIFIED

All new screens use scaled dimensions for sizes and fonts, with a tablet width cap. Please verify on multiple devices:

- ❑ No content cut off on any phone size.
- ❑ Status bar and gesture indicator do not overlap content.
- ❑ Form fields, buttons, and avatars look proportionate on small phones (e.g., older Androids ~360px wide), standard phones (~390px), and large phones (~430px+).
- ❑ Bottom-tab clearance: scroll Home / Register / Calendar to the bottom and confirm the last item is not hidden behind the nav.
- ❑ On a tablet (if available), the form is centered with a max content width (does not stretch edge-to-edge).

3.20 Logout Flow

- ❑ From the Profile screen, tap Log out → native confirmation dialog (Log out, Are you sure?).
- ❑ Cancel → stays on Profile.
- ❑ Log out → returns to Login screen.
- ❑ Trying to back-navigate after logout stays on Login.
- ❑ Logging back in with correct credentials returns to Dashboard.

4. Known limitations (please don't report these)

The following are **expected behaviors** for this build, not bugs:

- **Confirm appointment** in the popover is intentionally greyed out — backend endpoint `/confirm-appt` hasn't been added yet. Once the backend ships it, the mobile UI will activate automatically.
- **Push notifications** — Profile → Preferences lists "Push Notifications" as upcoming; the device-token endpoint isn't on the backend yet, so no system push toasts will appear.
- **Notifications inbox** is client-side only. If the user reinstalls the app or signs into a new device, the inbox starts empty. Server-backed persistence is a later enhancement, not part of M3.
- **Demo mode** — patient list, appointment list, summary counts, orders catalog, plan of care entries, visit history, and WhatsApp templates are all sample data. Login itself is live. Switching to live data is a one-line flag (not in scope for QA).
- **Tooth field on Orders** only appears when the clinic's `show_tooth` flag is on. The demo clinic has it on, so QA should see this field — if it's missing on a different live clinic, that's expected.
- **Procedure price auto-fill on Orders** uses the price stored on the procedure record in the catalog. If a procedure has no default price, the Price field stays empty after picking it — that's expected and the clinician can type the price manually.
- **Future WhatsApp** minimum date is tomorrow — same-day reminders are blocked by design (the web has the same rule).
- **Patient swap on Edit** — when you swap a patient and save, the calendar should now show the swapped patient on that slot. The original patient is not deleted; the booking just points at someone else.
- **Reports tab** is still a "coming soon" placeholder — M4 scope.
- **Billing tab** is still a "coming soon" placeholder — M4 scope.
- **App name** may show "smilecraft-mobile (Dev)" or similar — normal for non-production builds.

5. What to report

Please report anything that:

- Causes the app to crash, freeze, or restart.
- Shows text or images cut off, overlapping, or going off-screen.
- Has buttons that don't respond when tapped.
- Visibly diverges from the designer's Figma (colors, spacing, typography).
- Contains typos or grammar mistakes.
- Behaves inconsistently between two runs (worked once, didn't work next time).
- Is confusing or unclear from a user perspective.

Bug report format

Field	Example
Title	Patient list: 3-dots menu doesn't dismiss on backdrop tap (Android)
Device	Samsung Galaxy A52, Android 13
Steps to reproduce	1. Log in 2. Go to Register tab 3. Tap a patient's 3-dots menu 4. Tap outside the popover
Expected	Popover dismisses
Actual	Popover stays open until I tap the back button
Screenshot / Video	Attached

Send reports to Umer (WhatsApp / email).

6. Out of scope for this build

Feature	Coming in
Confirm appointment (popover action wired to live)	As soon as backend ships <code>/confirm-appt</code>
Push notifications (device-token + system toasts)	As soon as backend ships <code>/register-device-token</code>
Cashier / Billing tab (pending bills, payments, receipts)	M4
Reports tab	M4
Server-backed notifications inbox (persists across devices)	Later enhancement
iOS TestFlight build	After Apple Dev account

7. Test sweep priorities

If you only have 30 minutes — focus on:

1. Login (correct credentials)
2. Dashboard (greeting, summary cards, Total math = Confirmed + Unconfirmed, doctor switcher chips)
3. Register tab → "+" button opens the New Registration modal; fill it out and submit (demo)
4. Calendar Day view + tap an appointment → popover opens with all 7 actions
5. **Orders** → pick a procedure → verify Price auto-fills → stage one row → Save
6. **New Plan of Care** → tap a Quick Template pill → verify text inserts → counter updates → Save

If you have 60 minutes — add:

7. **Schedule Future WhatsApp** → pick template + tomorrow's date → Save (verify today's date is blocked)

8. **Clinical history** → switch between Visits and Plan of Care tabs
9. **Edit / Reschedule** → change date / start / end / notes → Save
10. **Search Patients** on Edit: type 2+ chars → tap a result → verify "Swapped — undo" badge appears → tap undo → original patient returns
11. **Delete appointment** from Edit screen → confirmation dialog → confirm → calendar slot clears
12. Patient list search + filter; Edit patient flow → success popup; Delete patient flow
13. Appointment popover → Cancel flow with reason picker
14. Profile screen + Notifications inbox

If you have 120+ minutes — add:

15. Calendar Week + Month views
16. Orders: stage 2+ procedures before submitting; verify Pending Procedures table renders + status-update dropdown changes a row's status
17. Plan of Care: hit the 1000-char cap; verify counter turns red and typing is blocked
18. Edit / Reschedule: end time before start time → inline error; invalid date / time mask → inline error
19. Search Patients: swap to a different patient → Save → verify calendar slot now shows the swapped patient's name
20. Doctor switcher: verify Dashboard summary counts and Calendar both react to chip selection
21. Verify per-doctor coloring on the calendar matches between Day / Week views for the same doctor
22. Form edge cases: duplicate phone confirm, future DOB, invalid email
23. Multi-device testing — small / standard / large phones; tablet if available
24. Layout sanity: scroll every screen (including new modals) to the bottom; nothing should hide behind the nav or gesture indicator
